

Start Here

How to launch the app. Three steps, no install.

Version 2.0

1

Unzip this download

Extract the whole folder to your computer first — don't open index.html from inside the zip's preview window, and don't run it straight from the download without extracting. Some file managers will open a broken, temporary copy if you skip this step. Extract fully, then continue.

2

Open index.html

Inside the extracted folder, double-click index.html. It opens in your default browser — Chrome, Edge, Firefox and Safari all work. There's nothing to install, no account to create, and no internet connection required.

3

Begin using it

A welcome screen offers two options: **Try sample menu**, to explore straight away with a ready-made example menu, or **Start my menu**, to add your own dishes right away. Either way, you're now using the app.

That's it — your menu saves automatically in this browser as you work, on this device only.

For a five-minute walkthrough, see **Quick Start Guide.pdf** in the docs folder. For the complete reference to every screen and calculation, see **User Guide.pdf** in the same place.
